

BECAUSE
**THE NETWORK HAS
GONE FROM COST
CENTER TO STRATEGIC
BUSINESS ENABLER.**
BUILD THE BEST.

Companies today are under tremendous pressure. They're trying to keep pace with the flood of mobile devices requiring anytime, anywhere access and secure applications, content and network components, all while contending with virtualization and cloud computing. To survive, companies need to build the best.

Juniper can help. Our high-performance wired and wireless networking solutions connect users to applications across campuses, branches, data centers and the Internet, delivering the ability to scale without disruption. Our open approach lets employees use their personal devices—or any app they choose—to perform their jobs securely, from any location, at anytime. Our solutions help organizations quickly adapt to business needs, deploying new applications and services quickly and confidently to ensure business continuity.

Best of all, Juniper does all of this while removing complexity from legacy multi-tiered networks. Our simplified architectures flatten the network by eliminating switch layers, dramatically improving performance and efficiency. Since fewer devices consume less space, use less power and are easier to manage and operate, Juniper solutions also lower operational and capital expenses. And because our switching, routing and security products all run the same Junos OS, management complexity and operational costs are further reduced.

HOW JUNIPER HELPS

In the campus, our Simply Connected portfolio of resilient switching, security, routing and wireless LAN (WLAN) solutions enhance collaboration by simplifying and securing access to business-critical information. In the virtualized data center, Juniper offers a complete portfolio of switching, routing and security products, as well as management and software services, to simplify and secure the dynamic data center environment.
